## Introduction

---

### About this document

This document describes how to connect [Nexaiot NIFE105W](#) to Azure IoT Hub using the Azure IoT Explorer with certified device application and device models.

IoT Plug and Play certified device simplifies the process of building devices without custom device code. Using Solution builders can integrated quickly using the certified IoT Plug and Play enabled device based on Azure IoT Central as well as third-party solutions.

This getting started guide provides step by step instruction on getting the device provisioned to Azure IoT Hub using Device Provisioning Service (DPS) and using Azure IoT Explorer to interact with device's capabilities.

[Nexaiot NIFE105W](#) is NEXCOM's NIFE product line comes in a range of form factors and processor configurations including Intel Atom and Intel Core processors to suit different application requirements. For NIFE 105W, it positions itself at the entry level of fieldbus controller, and suitable for M2M communication gateway and data server applications. Boosted by Intel® latest Apollo Lake-I processors and the palm size form-factor, NIFE 105W is the most suitable entry level automation system which satisfying the needs of steady system performance and installation in gateway field or a small controller cabinet.

## Step 1: Prerequisites

---

You should have the following items ready before beginning the process:

- [Azure Account](#)
- [Azure IoT Hub Instance](#)
- [Azure IoT Hub Device Provisioning Service](#)
- [Azure IoT Public Model Repository](#)

## Step 2: Prepare your Device

---

- Connect the power adapter, USB Keyboard/Mouse with [Nexaiot NIFE105W](#).
- Wait until the operating system is ready.

## Step 3: Prepare your DPS and iot hub

---

- Connect to the Azure portal and Create [Azure IOT Hub Device Provisioning Services](#) and [Azure IoT Hub Instance](#)
- Please keep the DPS information (ID Scope/Global device endpoint/Device Key).
- Please Create a device under [Azure IoT Hub Instance](#) and keep the device ID.

## Step 4: Build and Run the sample

---

- Download the [Xcare SDK](#) and the sample programs and save them to your local repository.
- Start a new instance of Visual Studio 2019.
- Open the **xcarePNP.csproj** solution in your local copy of the repository.
- In **Solution Explorer**, right-click and choose **Build** for build this project.
- right-click the **XcarePNP** project, click **Debug**, and then add run parameter : "-s dps -i {DPS ID Scope} -d {Device ID} -k {DeviceKey} -e {Global device endpoint}"
- click **Start new instance** to build and run the sample. The console displays messages as the application sends device-to-cloud messages to IoT Hub.

## Integration with Azure IoT Explorer

---

- Use the **DeviceExplorer** utility and Click **IoT Plug and Play components**

- (Step1) On the **Model ID** field to fill **dtmi:nexcom:NIFE105W;1**
- (Step2) You can add **Public Repository** or Choose **Local Folder** (Path on Models in your local copy of the repository).
- (Step3) Click **Components\***->Default component\*\*
- Refer [IOT Plug and Play components](#)
- You can see the device **Information\Properties(read-only)\Properties(writable)\Commands\Telemetry**
- Refer [IOT Plug and Play components Interface](#) to see the your device Interface.
- Refer [IOT Plug and Play components Properiteies](#) to see the your device Properitieies.
- Refer [IOT Plug and Play components Properiteies \(writable\)](#) to see the your device Properitieies(writable).
- Refer [IOT Plug and Play components Command](#) to sent your reboot command.
- Under **Telemetry** property and press **Start** to observe the messages IoT Hub receives from the application.
